

# Transform™ AP 2.0 for Oracle® JD Edwards EnterpriseOne™

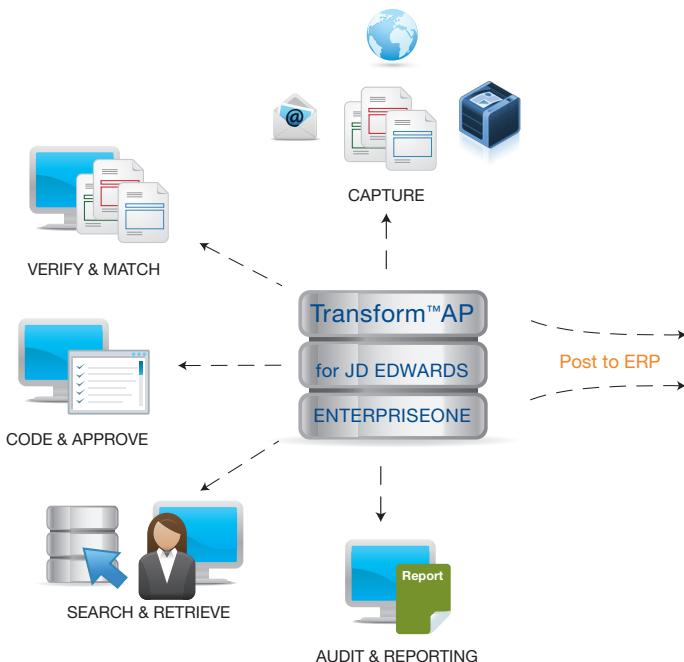

## Integrated Accounts Payable Invoice Management

As competition, economic pressures, and “green” initiatives drive the need for greater efficiency, increased productivity and a reduced reliance on paper, Accounts Payable automation is becoming a reality for leading organizations. Successful deployments allow these organizations to automate electronic coding and approval processes, implement strong compliance controls, and accurately forecast and manage cash positions. Transform AP, Bottomline’s invoice processing solution for EnterpriseOne, delivers against all of these requirements and more.

Now, with the release of version 2.0, generally available beginning March 2010, Bottomline has extended the capabilities of Transform AP for EnterpriseOne and implemented platform updates for the latest Windows®-based server and Web browser components.

### Enhanced Tax Handling

For customers whose business requirements include Value-Added Tax (VAT) or Goods & Services Tax (GST) handling, Transform AP for JDE 2.0 provides an improved user interface and workflow features during the non-PO invoice coding process. Incorporating these features into the

standard product offering is especially important for those Bottomline customers operating in EMEA, Canada, Australia and other non-U.S. locales.

Clients may now manage item costs and any included tax amounts at the invoice line level. Further classification for Tax Rate Area, Tax Explanation Codes, Tax Amount and Taxable Amount drive automated calculations and balancing, thereby posting accurate data to JDE for tax recovery reporting.

### Expanded Configuration

Transform AP has been designed and packaged with the goal of a short implementation timeline. This allows Transform AP users to more quickly achieve return on investment (ROI), as ROI delayed is ROI lost. However, Bottomline understands that each organization has variations and differences in their business and AP processes. Therefore Transform AP provides methodologies for customizing the product and the workflow.

Version 2.0 of Transform AP for JDE continues this commitment with several new configuration options debuting in the new release. These include the ability to configure auto-matching and an expansion of the named categories available with the Transform document archive facility, Transform Content Center.

### Product Refresh

Transform AP 2.0 for JDE also offers updated support for the latest Windows server components, desktop operating systems and Web browsers, including Windows 2008 Server, Windows 7 and Internet Explorer® 8.

Along with the refresh of underlying infrastructure technologies, Transform AP for JDE now operates on the latest release of Bottomline’s Transform platform, version 4.1.

Transform from Bottomline is a complete document process automation platform allowing Transform AP customers to expand the capabilities deployed within their AP operations to other areas of the business. For a complete listing of supported technologies, please refer to the Transform AP Technical Requirements overview, now available for your Bottomline account representative.

Transform AP 2.0 for JDE also includes improved documentation, resolution of priority items on the reported issue list, and a roll-up of previous patches and hot fixes. A detailed listing with descriptions of the enhancements in Transform AP 2.0 for JDE is available from Bottomline upon request.

### Upgrade Requests and Support

Transform AP 2.0 for JDE is available as an upgrade to all current Transform AP for JDE customers active on standard maintenance and support. Bottomline's Professional Services team is available to provide upgrade support, as well as additional customization services as needed. To request an upgrade or services quote, or if you would like additional information on the new features available with Transform AP 2.0 for JDE, please call 800.472.1321 (option 2) or email [transform@bottomline.com](mailto:transform@bottomline.com) to be connected to a representative in your region.

### About Bottomline Technologies

Bottomline Technologies (NASDAQ: EPAY) provides collaborative payment, invoice and document automation solutions to corporations, financial institutions and banks around the world. The company's solutions are used to streamline, automate and manage processes involving payments, invoicing, global cash management, supply chain finance and transactional documents. Organizations trust these solutions to meet their needs for cost reduction, competitive differentiation and optimization of working capital. Headquartered in the United States, Bottomline also maintains offices in Europe and Asia-Pacific. For more information, visit [www.bottomline.com](http://www.bottomline.com).
