

QlikView Publisher

QlikView Publisher, an optional module for QlikView Server, is an administration and management tool that provides a single control point for the company's QlikView analytics applications and QlikView reports. Administrators can schedule, distribute and manage security and access for QlikView applications and QlikView reports across the enterprise. With QlikView Publisher, companies can balance the business need for widespread distribution of analytics functionality and reports with the requirement to maintain centralized control and synchronization of sensitive corporate data.

Platform Overview

Delivering the right information to the right users at the right time – and in the right format

Analysis is now a critical success factor for any organization. As the use of business analysis spreads throughout the organization, controlling the distribution of analysis and reporting becomes increasingly important. With QlikView Publisher, you are in full control of the distribution of your company's QlikView applications and QlikView reports. QlikView Publisher automates the data refresh process for QlikView. In addition, it ensures applications and reports are distributed to the correct users, in the correct format when they need them. With QlikView Publisher, you can be sure the right information reaches the right user at the right time – and in the right format.

Data security control

QlikView Publisher ensures users only have access to documents and reports related to their data. Based on the security criteria set by an administrator, QlikView Publisher will slice a QlikView application into multiple QlikView documents and then distribute the finalized document to all authorized users. QlikView Publisher can also slice and distribute QlikView reports in PDF format to authorized users by email. This ensures users only have access to the data that is truly theirs.

Scaling Simplicity

Manage scheduling, distribution and security for all your QlikView applications and reports through a central Web-based management console.

Benefits

- Centralized, effective and secure administration of QlikView applications, reports and associated data
- Publish sub-sets of QlikView applications to a QlikView Server or to end-users based on their individual needs and access rights
- Full control of the time and frequency for the data reload and distribution of each application
- Enterprise-wide report distribution to unlimited users in PDF format via email

Enterprise report distribution

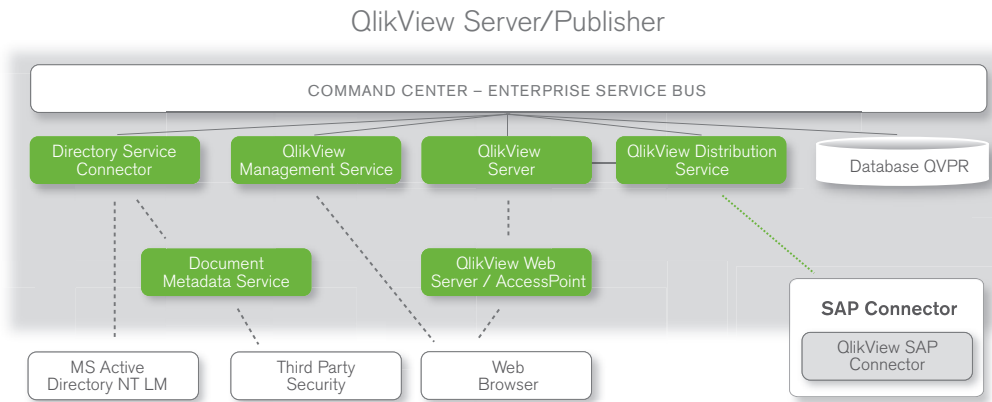

The addition of PDF report distribution via email to QlikView Publisher enables QlikView to meet enterprise report distribution requirements. Simply build a QlikView report on top of your existing QlikView analysis application and use the QlikView Publisher Distribution Wizard to reload the data, generate the PDFs and deliver them direct to your users inbox.

Secure access to business analysis

QlikView Publisher integrates directly with an organization's existing security model to control user access rights, making administration and distribution of business analysis and reports secure and efficient. With QlikView Publisher, it is easy to create routines which guarantee the quality, timeliness and accuracy of your company's decision support.

Built to meet today's scalability and manageability challenges

QlikView Publisher is built using Web Service technology to enable scalability and resilience. Services can be grouped to provide load-sharing and resilience. SNMP is provided to allow integration with Enterprise Monitoring tools. QlikView Publisher Tasks can, if needed, be triggered by external Enterprise Scheduling tools using Web service calls.

Technical Specification

QlikView	32-bit (x86)	64-bit (x64)
Platform	Windows XP Professional ¹ Windows Vista ¹ Windows Server 2003 Windows Server 2008	Windows XP Professional x64 Edition ¹ Windows Vista x64 ¹ Windows Server 2003 x64 Windows Server 2008 x64
Processor	Intel Core Duo compatible or higher recommended	Multi-core x64 compatible processors

Database	SQL Server 2005 or 2008 ³	SQL Server 2005 or 2008 ³

¹ QlikView is an in-memory analysis technology; memory requirements for QlikView products are directly related to the quantity of data being analyzed.

² Recommended for development and testing purposes only.

³ Optional.

QlikView Publisher

QlikView Publisher is the solution to handle your QlikView deployment needs, including:

- Deploying QlikView applications to thousands of users easily and securely
- Distributing QlikView reports to unlimited users in PDF via email
- Integrating with any security system
- Simplifying management of a growing QlikView deployment
- Maximum scalability and resilience
- Integrating seamlessly into QlikView Server
