

Transform Training course (4 days + 1Optional)

This course is a practical, hands-on introduction to the Transform Software development environment.

During the first three days, students will learn about the capabilities of the system, its design tools, and principles of good program design using the graphical development environment. The student will learn how to use the Transform Designer Software design tool to create new and navigate existing projects. Tasks will include importing a variety of data formats, performing basic data transformation, applying conditional processing, and presenting dynamically formatted output. Producing understandable, maintainable projects is emphasized throughout the instruction.

The fourth day covers administration of a Transform Foundation Server. It provides instruction for the installation, configuration, monitoring and administration of the core modules. Topics include but are not limited to: installation, system configuration, monitoring and troubleshooting processes, license key management, project administration, adding new users and deploying bundles. This hands-on day provides an understanding of how the software is used, installed, configured and monitored with a major focus on the use of the Administration web interface.

The final day of the Transform training course is a document design lab. Construct and test a document of your choice utilizing Transform Designer and Transform Foundation Server. Create one proprietary document using your own customer-specific data with a Litco instructor. The instructor will be available to help mentor you through any rough spots with planning, drawing, mapping, applied business logic and execution. Please bring one or more documents (time permitting), graphic files (such as your logo) and sample data.

The Course is actually 4 days, the fifth day is optional and highly recommended.
